GetFit User Stories

As an unregistered user I want to be able to register with GetFit and securely be logged in upon save so that I can become a member of GetFit and use its services.
This user story will be to implement a registration page that should contain fields for:
username (required,unique), first name (required, no special characters), last name (required, no special characters), password (required), password (required for duplication, privacy, and buttons for: save, cancel
On save they should be redirected to their dashboard
Use Cases:
1. User inputs unique form entries and clicks save. Expected result is that the user is created in the database, they are logged in through a secure route and redirected to the settings page. They should have the correct email, first name, last name, default privacy settings. Once they have filled in and saved their settings they should have the correct settings.
2. User registers with a username that is already in the database and clicks save. User is not created, and they should see a warning that "This username is in use"
3. User tries to use special characters in first name or last name or username. Textbox should highlight in red when typing and display the correct error "Cannot use special characters"
4. User tries to save with any required text fields being blank. User should not be added to the database, and warning should show up about required fields. "The * fields are required. Please fill them in to create an account with GetFit"
5. User clicks cancel at any time in the process of filling out the registration form. User should be redirected to the log-in page.
6. User clicks cancel from the settings page. They should be redirect to their dashboard.

profile and see challenge
participation)

[Save]

As a logged-in user I want to see a real time newsfeed of my subscriptions and my challenge updates on my dashboard.

This story is to implement the newsfeed portion of the dashboard. It should be updated in real time displaying activities and updates from challenges that user is subscribed to, and updates from the challenges that the user is participating in.
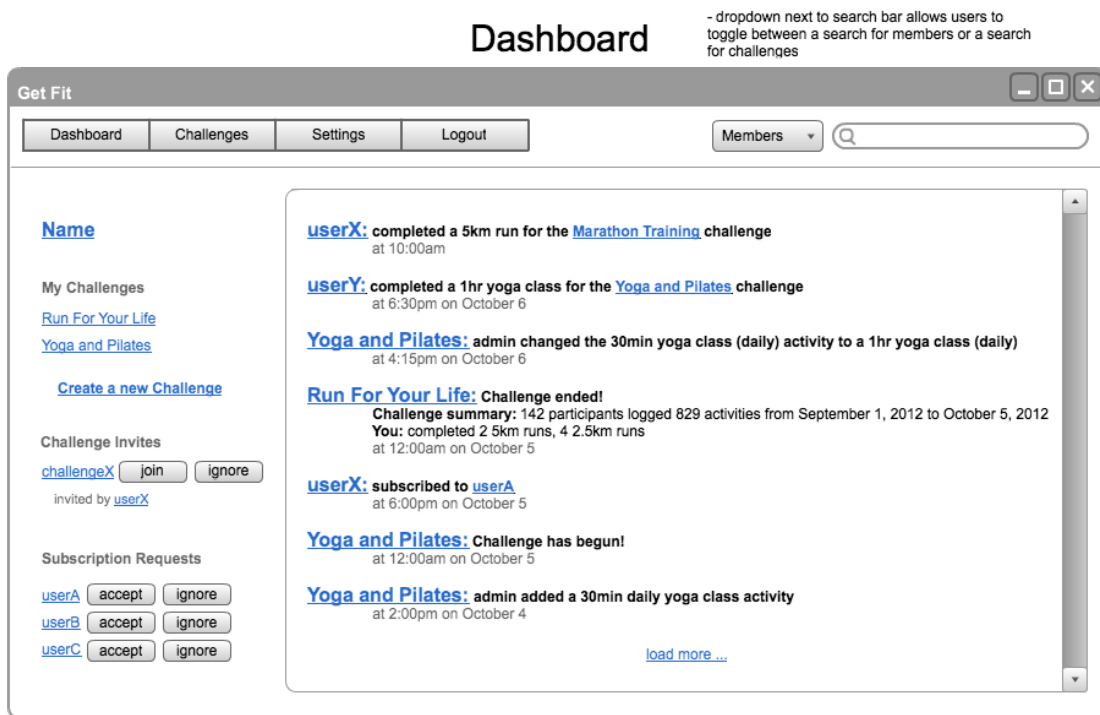

Use Cases:

1. Activities/Updates from users that you are subscribed to include but are not limited to: User completes an activity, User completes a challenge, and User starts a challenge

Activities/Update from challenges that you are participating in: Challenge location changes, and Challenge name changes

Any user completes an activity from this challenge (could be of the form 1 person has completed this activity if we are worried about privacy issues)

Challenge starts, Challenge end

Dashboard

- dropdown next to search bar allows users to toggle between a search for members or a search for challenges

As a logged in user I want my profile to be visible subject to my privacy settings so that my information is only shared at my choice.
This story is to implement the privacy settings when viewing profiles as the profile owner, as a subscriber, as a regular member, and a non-member. The profile should contain full name, username, and challenges the user is participating in.
Use Cases:
1. Privacy setting is set to public:
>   *As profile owner, subscriber, regular member: can see all items in the profile.*
>   *As non-member: error is returned*
2. Privacy setting is set to limited:
>   *As profile owner, subscriber: can see all items in the profile*
>   *As member: can only see username, and subscribe button*
>   *non-member: gets back an error*
3. Privacy setting is set to only-me:
>   *As profile owner: can see all items in profile*
>   *As subscriber, and regular member: can see only username, and subscribe button*
>   *As non-member: get back an error.*

Note: Make sure the following use case is covered:
As a user I want to change the privacy policies for my profile so that I can keep it as private as I want for other users.

◯ Private
(Only subscribers can view profile and see challenge participation)

As a user I can join a public challenge on the challenge page so I can get started with my fitness

The purpose of this user story is to allow users to join public challenges

Use Cases:

1. On the challenge page for all public challenges there should be an option to join.

2. If the user joins, the challenge should be added to their list of challenges on the main challenges page.

3. They should receive updates on that challenge

4. They should be able to mark activities as complete.

As a user, I want to be able to create a new challenge so that I can start my own challenge.

This story is to implement creating challenges

Use Cases:

1. If mandatory fields are incomplete, clicking the "create challenge" button will prompt for mandatory fields (name, duration, privacy).

2. If challenge successfully created, user should be redirected to their new challenge's page.

3. If challenge successfully created, user should be a participant and the admin of the challenge.

4. In case of error, appropriate message will be displayed to user.

[Create Challenge]

As a Challenge Admin, I want to be able to add activities to the challenge so that I can customize my challenge.
This story is to add activities to a challenge.
Use Cases:
1. In the create challenge view, selecting an activity will add it to the challenge.
2. When added to a challenge, an activity should display a form with optional fields the user can fill. Fields: time, duration, frequency, quantity

Create Challenge

As a user I can search challenges by name or location in all pages so it is easier for me to find a particular challenge I am looking for
This user story is to allow a user to search for challenges given any challenge field.
*Use Case:*
1. Users can enter a string into the top right hand search box and select from a drop down whether they are searching by name, location, or category and then press search.
2. Search should query on the sub field selected and match to the string entered.
3. If no results found, display search page stating "no results found"
4. Otherwise, display all search results found sorting alphabetically.

As a user in my search results I can sort challenges by the date created, number of participants, and alphabetically so it is easier for me to find a particular challenge
This use case is to be able to filter search results for challenges.
Use Cases:
1. User should be able to click the sort by button which contains name, date created, and number of participants. Reverse ordering will be available for each sort as well
2. Default ordering will be (A-Z) for name

As a Challenge Participant, on the challenge page, I want to be able to mark an activity completed so I can track my progress.
This user story is to create a section on the challenge page allowing participants to mark activities complete. This section should only be viewable by participants during the challenge duration.
Use Cases:
1. As a challenge participant of an ongoing challenge, they should be able to mark an activity as complete
2. As a challenge participant of a finished challenge, the user should not be able to mark activities complete.
3. As a general user not part of a challenge, user should not be able to mark activities complete.

Challenge Page - participant
- if user is admin, "Withdraw" becomes "Edit"

As a logged in user I want to be able to view other member's profiles from my dashboard (subject to their privacy settings) so that I can get information on whom I am getting a newsfeed about.

This story is to implement viewing profiles from the dashboard.

Use Cases:

1. When a user clicks on a user name in the newsfeed, they should be redirected to that user's profile.

2. When a user clicks on a user name in the challenge, they should be redirected to that user's profile.

- if user viewing profile is not subscribed/subscription hasn't been accepted, the user is not able to see the Recent Activity section

User Profile

- if user viewing profile is already subscribed -> button = "Unsubscribe"
- if request pending, button = "Subscribe" and unclickable
- if user is viewing their own profile, no button
